

Mantech has immediate openings in systems engineering and life cycle support programs with the DHS Domestic Nuclear Detection Office (in Rosslyn) and a new SETA contract with Customs and Border Protection's Secure Borders Initiative (in Crystal City).

Immediate employment in the following job categories:

- Integration Test Engineer (mid-level)
- Senior Software Developer
- Lead Systems engineer (program management or DAWIA cert a plus)
- SE/Analyst (mid-level) (4 openings)
- Junior Systems Engineer

The discipline is classical DAU systems management, and one of the systems engineers will also be the lead supportability person for deployment of the southern tier system. It's a great opportunity if someone's looking for work this month.
